Gas Monitor BW MicroClip

Product information

Under this gas detector is the same bestselling BW MicroClip but has been redesigned and rebranded as the BW Gas Alert Micro Clip XL and given a brand-new cutting-edge battery design, providing up to 18 hours of operation. Eight hours more than the preceding version.

The popularity of this portable gas monitor is not just due to its reliability, but also its lightweight, small design and single-button mode of operation, making it very easy to use, especially within confined spaces.

For a more robust solution, especially against the challenges of working in cold conditions, the BW Microclip XL is ideal and comes with extended battery life.

Both options offer continuous visual compliance indication at a glance with the green IntelliFlash™, while the easy one-button operation reduces training, and will allow workers to focus more safely on the job at hand.

You can configure the BW MicroClip XL gas detector to monitor combinations of the following: Hydrogen Sulphide (H2S), Carbon Monoxide (C0), Oxygen (O2) and Combustible LEL
