

Fork Mounted Underslung Scoop

Product information

Underslung Scoops are an ideal alternative to a loading shovel allowing your forklift to become a more universal asset. The design brings the load close to the forklift reducing the load centre, and in turn making the combined length of scoop and truck shorter, which is a benefit when working in tight spaces. Ideal for the movement or loading of loose materials such as sand, gravel and top soil.

Standard Features

- Secondary locking mechanism to prevent accidental discharge
- Welded Wear Strip to front lip of bucket
- Bucket release handle on both sides of the frame
- Maximum fuck section 150 x 50mm at 683mm centres
- Floor stand for ease of entry and exit of the fork pockets
- Zinc plater Heel Pins for safe attachment to truck
- Painted bright orange for safety

Optional Extras

- Pull chain c/w Chain Keep for High Level Discharge
