

Fall Arrest Block With Recovery Winch RGA4

Product information

A three way retrieval block with the expected fall arrest capabilities, but with the added extra of an up/down winch mechanism. The recovery feature means operatives who have experienced a fall can be winched up or down to safety. The man-riding winch function must only be used for retrieval, NOT for access/egress.

This fall arrest block must be backed up with a separate fall arrest system, and a rescue provision that is also separate to this device.

This item must be used with a safety harness.
