CTX Tandem Tool Single-size kit

Product information

This Tandem Tool is designed to provide additional lifting points to a chain hoist. It allows easy fit in the hatch, and it can be raised to the ideal unloading height and by that avoiding heavy lifts from low points.

- ASME
- Approved accessory by Kito and Liftket
- Approved working tool by customers within the renewable industry

Different clamp sizes are available to fit different hoists and load chain diameters. The clamps can only close on the right size chain. Fitting verification is also possible by the name plate of the hoist.

Safety feature: If pins are unintentionally inserted “wrong” (partially or inverted), an extra locking position ensures that the CTX Tandem Tool can still hold the full load.

Multi tool setup: Important not to exceed the hoist capacity.
