

Self-inflating Lifejacket GC Rescuer 150n

Product information

Self-inflating Lifejacket GC Rescuer 150n designed for intensive work.

EN ISO 12402-3 : 2020 –Personal flotation equipment , class 3 Performance level 150Newtons – safety requirements for life jackets used offshore and rough waters.

With a 165 Newtons Bladder and the UML Elite Pro inflater, this lifejacket is even shorter than our previous models, and is designed with a two fabrics envelope. The Nylpêche fabric, ultra-resistant to abrasion and tearing, is placed on the areas subject to wear and tear and the very soft Glentex fabric, for more comfort at the neck.

A window, turned towards the body (to avoid premature wear), allows the user to check that everything is operational before putting it on.

Features:

- Designed with a plastic buckle for lightness and crotch strap to avoid losing the lifejacket when falling into the water.
- Ergonomic, ultra-short, therefore not too constricting, with a wide neckline that favours head movement and distributes the weight of the waistcoat over the shoulders rather than the neck.
- Automatic release but also manual + oral inflation.
- On-board winding handle, 2-tone whistle, and facilities for fitting a beacon or marker light.
- Changing the gas cartridge and cylinder is very simple, quick and economical.
- The waistcoat should not be folded without being dried and rearmed.
- Check that all accessories are in order and in place.
